

# Harith Laxman A.G.

📍 Chennai, India    ✉ ag.harithlaxman@gmail.com    🌐 harithlaxman.netlify.app

## PROFILE

---

A hardworking and creative software developer who has proficient skills in Python, Java, Machine Learning, and Computer vision along with an eagerness to learn more and contribute to solving real-world problems. Experienced in developing Web Applications, and Mobile-apps using Java as well as optimizing their performance. Confident communicator and strategic thinker and innovative developer who can design software that is customized to the company's organizational needs, highlight their core competencies, and further their success.

## EDUCATION

---

### Vellore Insitute of Technology

B.Tech in Computer Science and Engineering with specialization in Bioinformatics

• GPA :- 8.32/10

2017 – 2021

Vellore, India

## PROFESSIONAL EXPERIENCE

---

### Systems Engineer

Tata Consultancy Services

08/2021 – present

Chennai, India

- Working as a Fullstack Java Developer for a Banking client.
- Developed and implemented several Netbanking, Mobile banking, and UPI functionalities using Java Webservices.
- Deployed these applications through Oracle Weblogic and monitored their operations in production.
- Completed the migration of the application from WebLogic version 12.2.1.2 to 12.2.1.4 and solved critical compatibility issues.
- Monitoring performance of the servers in the Test environment and Production thereby optimizing the application wherever necessary.

SKILLS:- Java Web Services, Core Java, SQL, Front-end Web Development, Oracle Weblogic, Linux System Administration

### Python Developer (Internship)

Finnmomenta Pvt. Ltd.

04/2020 – 05/2020

Chennai, India

- Developed and Implemented a program in python that would extract details from an encrypted bank account statement with the help of OpenCV, Anaconda, and other python libraries.
- Developed and implemented a program that would analyze each transaction from the extracted bank statements and buckets them into pre-defined categories with the help of Regular Expressions in Python.

SKILLS:- Python, Regular Expressions, OpenCV, Git, OCR.

## PROJECTS

---

### Crop Disease Prediction using Deep Learning methods

A real-time crop disease detection and prediction model developed using YOLOv3 and ResNet-152 which can accurately detect and predict 38 different diseases in 14 plant species.

### Handwritten signature forgery detection using ResNet

A deep learning model developed using resnet-50 that can detect and identify forged signatures from original ones.

### Residual Learning Formulation for Generic Image De-noising

A generic image de-noising model that can predict Gaussian noise in an image to an unknown level (Blind Gaussian denoising) using deep CNNs and enhanced by formulations of residual learning and Batch normalization.

### Cursor Control based on Human Facial Movements

A python program that uses openCV to capture the user's facial movements and translates them into cursor movements with the help of Pyautogui.

## SKILLS

---

Java | SQL | REST & SOAP Web services | Python | Deep Learning | Computer Vision | Unix & Shell scripting

Front-end web development

## CERTIFICATIONS
